092 Barometer Pressure Sensor

The 092 Barometric Pressure Sensor measures absolute atmospheric pressure and converts it into a linear, proportional voltage, using digital computer technology.

The 092 features robust, low maintenance construction that will withstand a widerange of adverse weather conditions, and consistently collects reliable barometric pressure data. The standard range of the 092 is 600 to 1100 hPa, which makes it suitable for elevations sea level to 10,000 ft. Other ranges can be configured with DIP switches on the board of the barometer. The digital range is always 600 to 1100 hPa.

Features

- Compact size
- Weatherproof enclosure
- Digital and analog outputs
- Permanent calibration; no service required
- Customer configured output

Applications

- Ambient Air Monitoring
- Environmental Surveys
- Government Networks
