

1.2.3 High Energy Pyroelectric Sensors

100μJ to 10J

Features

- Premium DIFH & DIFH2 energy sensors BF coating for highest damage threshold
- Metallic coating for high repetition rates up to 10kHz
- Measure lasers with pulse widths up to 20ms
- Flavors focusing on UV and others focusing on VIS-IR

Note: (c) With the “user threshold” setting set to minimum. For other settings, the spec is for >10%/>7% of full scale or greater than twice the “user threshold”, whichever is greater. The user threshold is not available with LaserStar, Nova/Orion, Pulsar, USBI and Quasar. For these meters, the threshold is set to minimum and the linearity spec is >10% of full scale. The PE-C series will only operate with Nova or Orion meters with an additional adapter Ophir P/N 7Z08272 (see page 139). The adapter can introduce up to 1% additional measurement error. The user threshold feature allows adjustment of the internal threshold up to 25% of full scale if desired to avoid false triggering in noisy environments. For further information, see the FAQs on our Website.																				
Note: (d) With the LaserStar, Pulsar, USBI, Quasar and Nova/Orion with adapter only 2 out of 5 pulse width settings are available. For PE50BF-DIFH2-C & PE50BF-UV-DIFH-C sensors the 1ms and 10ms settings and for PE50-DIFH2-C & PE50-UV-DIFH-C sensors the 2μs (displayed as “30μs”) and 1ms settings. Furthermore, with the diffuser mounted, the sensor may saturate at lower than the maximum energy in some cases. Therefore it is recommended to use these sensors with the newer meters/PC interfaces.
