

Quick Guide

Vaisala Temperature Transmitter TMI110

Product overview

The TMI110 temperature transmitter is designed for measuring cooling/heating water temperatures in HVAC automation systems. When measuring the temperature of liquid, the transmitter is installed in a thermowell, as shown in this Quick Guide. For air temperature measurements, the transmitter can be installed in a duct using a flange.

The TMI110 temperature transmitter has two output options: analog (4 ... 20 mA) and Modbus® RTU. The transmitter's component board contains a service port, which can be used for field calibration of the device, and for changing the scale of measurement using Vaisala Insight PC software (available for download at www.vaisala.com/insight).

For the full TMI110 product specifications and user guidance, see *TMI110 Datasheet* (B212427EN) and *HMDW110 Series User Guide* (M211726EN), available at docs.vaisala.com.
