Oxygen Sensing – LuminOx ppm Modbus Register Set

This document details the Modbus register set developed to control and analyse data from the LuminOx ppm oxygen sensor.

Contents

1 DEFINITIONS

The following definitions apply to WARNINGS, CAUTIONS, ACTIONS and NOTES used throughout this manual.

WARNING:

The warning symbol is used to indicate instructions that, if they are not followed, can result in minor, serious or even fatal injuries to personnel.

CAUTION:

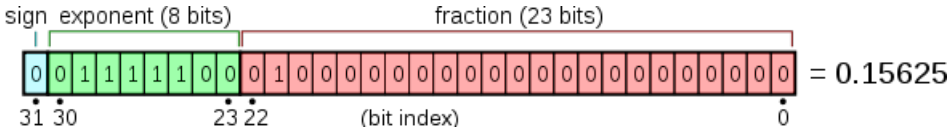
The caution symbol is used to indicate instructions that, if they are not followed, can result in damage to the equipment (hardware and/or software), or a system failure occurring.

ACTION: How data from the device should be used during normal operation.

NOTE: Operating conditions or statements pertaining to the recommended action.

The following terminology and acronyms are used throughout this manual:

- **Input registers** – are read only 16-bit registers. Valid address range starts at 30001.
- **Holding registers** – are read / write 16-bit registers. Valid address range starts at 40001.
- **MSB** – Most Significant Bits.
- **LSB** – Least Significant Bits.
- **EEPROM** - Electrically Erasable Programmable Read-Only Memory.
- **32-bit Integers** – Unsigned 32-bit integers are split over two 16-bit registers where the MSB and LSB are identified.
- **Floating point numbers** – are digitally represented using the IEEE–754 format. Single precision floating point numbers are used throughout and they require 32-bits of data. Since a Modbus register holds 16-bits, it takes two registers to represent a floating point number. The IEEE 754 standard specifies a binary32 as having:
  - Sign bit: 1 bit
  - Exponent width: 8 bits
  - Significand precision: 24 bits (23 explicitly stored)



For example, 20.7 in IEEE 754 format is: 0 10000011 01001011001100110011010

2 MODBUS SETUP

NOTE: Background reading is strongly recommended if there is no prior knowledge of Modbus. A good place to start is www.modbus.org, where the specification and resources can be obtained in the technical resources page.

The RS232 TTL Modbus interface is configured as follows:

- **Modbus mode:** RTU
- **Address:** One
- **Baudrate:** 9600
- **Parity:** None
- **Stopbits:** Two

3 MODBUS REGISTERS

NOTE: Default values are shown in **bold**.

NOTE: Values shown in grey are reserved, not applicable or indicate that they should not be changed.

3.1 Serial Registers

Table 3-1 – Serial - Input Registers

Name	Register Address	Description	Actions / Notes
Serial Status	0x762B (30251)	0 = Error Error committing serial changes to memory 1 = Not Ready Serial changes are currently not permitted **2 = Ready** Serial changes are permitted 3 = Busy Serial changes in process 4 = Complete Serial changes committed to memory, system will restart in 1s with the new communication settings	**ACTION:** Monitor in system **NOTE:** Used in Table 3-2 below.

Table 3-2 – Serial - Holding Registers

Name	Register Address	Description / Valid Values	Actions / Notes
Serial Address[a]	0x9D3B (40251)	**1**-247	**ACTION:** Set/Monitor in system
Reserved	0x9D3C (40252)	Reserved	
Reserved	0x9D3D (40253)	Reserved	
Serial Control	0x9D3E (40254)	**0 = Idle** 1 = Save and reset	

[a] LuminOx ppm evaluation kit; sensor serial address set to 1.

3.2 Temperature Registers

Table 3-3 – Temperature - Input Registers

Name	Register Address	Description	Actions / Notes
Temperature ID	0x7725 (30501)	0101	**ACTION:** For reference **NOTE:** Unique identifier
Temperature Warning	0x7726 (30502)	16-bit bitmask Each bit represents an individual warning state 0 = No fault Temperature within normal operating range 14 = Greater Temperature above valid operating limit 15 = Less Temperature below valid operating limit	**ACTION:** Monitor in system **NOTES:** Warnings are not retained on power loss.
Temperature Error	0x7727 (30503)	16-bit bitmask Each bit represents an individual error state	**ACTION:** Monitor in system **NOTES:** Errors are not retained on power loss.
Temperature Uncalibrated Value	0x7728 (30504)	Floating point IEEE 754 (MSB 16-bits) Unit = °C	**ACTION:** Monitor in system
	0x7729 (30505)	Floating point IEEE 754 (LSB 16-bits) Unit = °C	
Temperature Calibrated Value	0x772A (30506)	Floating point IEEE 754 (MSB 16-bits) Unit = °C Valid Range = -10 to 35	**ACTION:** Monitor in system
	0x772B (30507)	Floating point IEEE 754 (LSB 16-bits) Unit = °C Valid Range = -10 to 35	
Temperature Status	0x772C (30508)	0 = Loading System initialising, no temperature measurements 1 = OFF No temperature measurements 2 = Standby No temperature measurements 3 = Reserved **4 = ON** Valid temperature measurements 5 = Reserved 6 = Calibration Invalid temperature measurements, calibration in process	**ACTION:** Monitor in system

Table 3-4 – Temperature - Holding Registers

Name	Register Address	Description / Valid Values	Actions / Notes
Temperature Control	0x9E35 (40501)	Reserved	**ACTION:** Monitor in system **NOTE:** The temperature measurement cannot be switched off.
Clear Temperature Warning	0x9E36 (40502)	**0 = Idle** 1 = Clear warning (Reserved)	**ACTION:** None **NOTE:** Any warning present in *Temperature Warning* (30502) will auto clear if the condition that caused the warning is removed.
Clear Temperature Error	0x9E37 (40503)	**0 = Idle** 1 = Clear Error	**ACTION:** None **NOTE:** If an error present in *Temperature Error* (30503) has forced *Temperature Status* to *OFF* (30508 = 1) the error may be cleared using this register. If the error persists, contact technical@sstsensing.com for guidance.

3.3 Pressure Registers

Table 3-5 – Pressure - Input Registers

Name	Register Address	Description	Actions / Notes
Pressure ID	0x781F (30751)	0102	**ACTION:** For reference **NOTE:** Unique identifier
Pressure Warning	0x7820 (30752)	16-bit bitmask Each bit represents an individual warning state 0 = No fault Pressure within normal operating range 14 = Greater Pressure above valid operating limit 15 = Less Pressure below valid operating limit	**ACTION:** Monitor in system **NOTES:** Warnings are not retained on power loss.
Pressure Error	0x7821 (30753)	16-bit bitmask Each bit represents an individual error state	**ACTION:** Monitor in system **NOTES:** Errors are not retained on power loss.
Pressure Uncalibrated Value	0x7822 (30754)	Floating point IEEE 754 (MSB 16-bits) Unit = mbar	**ACTION:** Monitor in system
	0x7823 (30755)	Floating point IEEE 754 (LSB 16-bits) Unit = mbar	
Pressure Calibrated Value	0x7824 (30756)	Floating point IEEE 754 (MSB 16-bits) Unit = mbar Valid Range = 500 to 1200	**ACTION:** Monitor in system
	0x7825 (30757)	Floating point IEEE 754 (LSB 16-bits) Unit = mbar Valid Range = 500 to 1200	
Pressure Status	0x7826 (30758)	0 = Loading System initialising, no pressure measurements 1 = OFF No pressure measurements 2 = Standby No pressure measurements 3 = Reserved **4 = ON** Valid pressure measurements 5 = Reserved 6 = Calibration Invalid pressure measurements, calibration in process	**ACTION:** Monitor in system

Table 3-6 – Pressure - Holding Registers

Name	Register Address	Description / Valid Values	Actions / Notes
Pressure Control	0x9F2F (40751)	Reserved	**ACTION:** Monitor in system **NOTE:** The pressure measurement cannot be switched off.
Clear Pressure Warning	0x9F30 (40752)	**0 = Idle** 1 = Clear warning (Reserved)	**ACTION:** None **NOTE:** Any warning present in *Pressure Warning* (30752) will auto clear if the condition that caused the warning is removed.
Clear Pressure Error	0x9F31 (40753)	**0 = Idle** 1 = Clear Error	**ACTION:** None **NOTE:** If an error present in *Pressure Error* (30753) has forced *Pressure Status* to *OFF* (30758 = 1) the error may be cleared using this register. If the error persists, contact technical@sstsensing.com for guidance.

3.4 ppO_2 Registers

Table 3-7 – ppO_2 - Input Registers

Name	Register Address	Description	Actions / Notes
ppO_2 ID	0x7919 (31001)	0103	**ACTION:** For reference **NOTE:** Unique identifier
ppO_2 Warning	0x791A (31002)	16-bit bitmask Each bit represents an individual warning state 0 = No fault ppO_2 within normal operating range 14 = Greater ppO_2 above valid operating limit 15 = Less ppO_2 below valid operating limit	**ACTION:** Monitor in system **NOTES:** Warnings are not retained on power loss.
ppO_2 Error	0x791B (31003)	16-bit bitmask Each bit represents an individual error state	**ACTION:** Monitor in system **NOTES:** Errors are not retained on power loss.
ppO_2 Uncalibrated Value	0x791C (31004)	Floating point IEEE 754 (MSB 16-bits) Unit = mbar	**ACTION:** Monitor in system **NOTES:** This value can be greater than or less than the sensor range and is used to determine measurement stability during the calibration process. Refer to instructions on page 3-14.
	0x791D (31005)	Floating point IEEE 754 (LSB 16-bits) Unit = mbar	
ppO_2 Calibrated Value	0x791E (31006)	Floating point IEEE 754 (MSB 16-bits) Unit = mbar Valid Range = 0 to 1.2	**ACTION:** Monitor in system **NOTE:** Refer to instructions on page 3-14.
	0x791F (31007)	Floating point IEEE 754 (LSB 16-bits) Unit = mbar Valid Range = 0 to 1.2	
ppO_2 Status	0x7920 (31008)	0 = Loading System initialising, no ppO_2 measurements 1 = OFF No ppO_2 measurements 2 = Standby No ppO_2 measurements 3 = Reserved **4 = ON** Valid ppO_2 measurements 5 = Reserved 6 = Calibration Invalid O_2 measurements, calibration in process	**ACTION:** Monitor in system **NOTE:** Refer to instructions on page 3-14.

Name	Register Address	Description	Actions / Notes
ppO_2 Offset Status (Calibration)	0x7921 (31009)	0 = Error Error during the calibration process 1 = Not Ready Calibration is currently disabled **2 = Ready** Calibration enabled 3 = Busy Calibration in progress 4 = Complete Calibration complete	**ACTION:** Monitor in system **NOTE:** Refer to instructions on page 3-14.
ppO_2 Gain Status (Calibration)	0x7922 (31010)	0 = Error Error during the calibration process 1 = Not Ready Calibration is currently disabled **2 = Ready** Calibration enabled 3 = Busy Calibration in progress 4 = Complete Calibration complete	**ACTION:** Monitor in system **NOTE:** Refer to instructions on page 3-14.
ppO_2 DAC (Diagnostic)	0x7923 (31011)	32-bit integer (MSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	**ACTION:** Monitor in system
	0x7924 (31012)	32-bit integer (LSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	
ppO_2 DAC Status (Diagnostic)	0x7925 (31013)	0 = Error Error during the diagnostic index change process 1 = Not Ready Diagnostic values are currently disabled **2 = Ready** Diagnostic values enabled	**ACTION:** Monitor in system
ppO_2 ADC Background (Diagnostic)	0x7926 (31014)	32-bit integer (MSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	**ACTION:** Monitor in system
	0x7927 (31015)	32-bit integer (LSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	

Name	Register Address	Description	Actions / Notes
ppO₂ ADC Background Status (Diagnostic)	0x7928 (31016)	0 = Error Error during the diagnostic index change process 1 = Not Ready Diagnostic values are currently disabled **2 = Ready** Diagnostic values enabled	**ACTION:** Monitor in system
ppO₂ ADC Peak (Diagnostic)	0x7929 (31017)	32-bit integer (MSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	**ACTION:** Monitor in system
	0x792A (31018)	32-bit integer (LSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	
O₂ ADC Peak Status (Diagnostic)	0x792B (31019)	0 = Error Error during the diagnostic index change process 1 = Not Ready Diagnostic values are currently disabled **2 = Ready** Diagnostic values enabled	**ACTION:** Monitor in system

Table 3-8 – ppO_2 Sensor - Holding Registers

Name	Register Address	Description / Valid Values	Actions / Notes
ppO_2 Control	0xA029 (41001)	Reserved	**ACTION:** Monitor in system
Clear ppO_2 Warning	0xA02A (41002)	**0 = Idle** 1 = Clear warning (Reserved)	**ACTION:** None **NOTE:** Any warning present in *ppO_2 Warning* (31002) will auto clear if the condition that caused the warning is removed.
Clear ppO_2 Error	0xA02B (41003)	**0 = Idle** 1 = Clear error	**ACTION:** Set in system **NOTE:** If an error present in *ppO_2 Error* (31003) has forced *ppO_2 Status* to *OFF* (31008 = 1) the error may be cleared using this register. If the error persists, contact technical@sstsensing.com for guidance.
ppO_2 Offset (Calibration)	0xA02C (41004)	Floating point IEEE 754 (MSB 16-bits) Unit = mbar Valid Range = 0 to 0.1	**ACTION:** Set/Monitor in system **NOTES:** Any changes are saved in EEPROM and retained on power loss. Default = **0.01**. Refer to instructions on page 3-14.
	0xA02D (41005)	Floating point IEEE 754 (LSB 16-bits) Unit = mbar Valid Range = 0 to 0.1	
ppO_2 Offset Control (Calibration)	0xA02E (41006)	**0 = Idle** 1 = Apply Calibration 2 = Reset Status	**ACTION:** Set in system **NOTE:** Refer to instructions on page 3-14.
ppO_2 Gain (Calibration)	0xA02F (41007)	Floating point IEEE 754 (MSB 16-bits) Unit = mbar Valid Range = 0.1 to 1.2	**ACTION:** Set/Monitor in system **NOTES:** Any changes are saved in EEPROM and retained on power loss. Default = **1.0**. Refer to instructions on page 3-14.
	0xA030 (41008)	Floating point IEEE 754 (LSB 16-bits) Unit = mbar Valid Range = 0.1 to 1.2	
ppO_2 Gain Control (Calibration)	0xA031 (41009)	**0 = Idle** 1 = Apply Calibration 2 = Reset Status	**ACTION:** Set in system **NOTE:** Refer to instructions on page 3-14.

3.5 O_2 Registers

Table 3-9 – O_2 Sensor - Input Registers

Name	Register Address	Description	Actions / Notes
O_2 ID	0x7A13 (31251)	0104	**ACTION:** For reference **NOTE:** Unique identifier
O_2 Warning	0x7A14 (31252)	16-bit bitmask Each bit represents an individual warning state 0 = No fault O_2 within normal operating range 14 = Greater O_2 above valid operating limit 15 = Less O_2 below valid operating limit	**ACTION:** Monitor in system **NOTES:** Warnings are not retained on power loss.
O_2 Error	0x7A15 (31253)	16-bit bitmask Each bit represents an individual error state	**ACTION:** Monitor in system **NOTES:** Errors are not retained on power loss.
O_2 Uncalibrated Value	0x7A16 (31254)	Floating point IEEE 754 (MSB 16-bits) Unit = ppm	**ACTION:** Monitor in system **NOTES:** This value can be greater than or less than the ppm sensor range and is used to determine measurement stability during the calibration process. Used in Section 3.6 on page 3-14.
	0x7A17 (31255)	Floating point IEEE 754 (LSB 16-bits) Unit = ppm	
O_2 Calibrated Value	0x7A18 (31256)	Floating point IEEE 754 (MSB 16-bits) Unit = ppm Valid Range = 0 to 1200	**ACTION:** Monitor in system **NOTE:** Used in Section 3.6 on page 3-14.
	0x7A19 (31257)	Floating point IEEE 754 (LSB 16-bits) Unit = ppm Valid Range = 0 to 1200	
O_2 Status	0x7A1A (31258)	0 = Loading System initialising, no O_2 measurements 1 = OFF No O_2 measurements 2 = Standby No O_2 measurements 3 = Reserved **4 = ON** Valid O_2 measurements 5 = Reserved 6 = Calibration Invalid O_2 measurements, calibration in process	**ACTION:** Monitor in system **NOTE:** Used in Section 3.6 on page 3-14.

Name	Register Address	Description	Actions / Notes
O_2 Offset Status (Calibration)	0x7A1B (31259)	0 = Error Error during the offset calibration process 1 = Not Ready Offset calibration is currently disabled **2 = Ready** Offset calibration enabled 3 = Busy Offset calibration in progress 4 = Complete Offset calibration complete	**ACTION:** Monitor in system **NOTES:** Used in Section 3.6.1 on page 3-14.
O_2 Gain Status (Calibration)	0x7A1C (31260)	0 = Error Error during the gain calibration process 1 = Not Ready Gain calibration is currently disabled **2 = Ready** Gain calibration enabled 3 = Busy Gain calibration in progress 4 = Complete Gain calibration complete	**ACTION:** Monitor in system **NOTES:** Used in Section 3.6.2 on page 3-14.
O_2 DAC (Diagnostic)	0x7A1D (31261)	32-bit integer (MSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	**ACTION:** Monitor in system
	0x7A1E (31262)	32-bit integer (LSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	
O_2 DAC Status (Diagnostic)	0x7A1F (31263)	0 = Error Error during the diagnostic index change process 1 = Not Ready Diagnostic values are currently disabled **2 = Ready** Diagnostic values enabled	**ACTION:** Monitor in system
O_2 ADC Background (Diagnostic)	0x7A20 (31264)	32-bit integer (MSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	**ACTION:** Monitor in system
	0x7A21 (31265)	32-bit integer (LSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	

Name	Register Address	Description	Actions / Notes
O_2 ADC Background (Diagnostic)	0x7A22 (31266)	0 = Error Error during the diagnostic index change process 1 = Not Ready Diagnostic values are currently disabled **2 = Ready** Diagnostic values enabled	**ACTION:** Monitor in system
O_2 ADC Peak (Diagnostic)	0x7A23 (31267)	32-bit integer (MSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	**ACTION:** Monitor in system
	0x7A24 (31268)	32-bit integer (LSB 16-bits) Unit = (0.8mv) steps Valid range = 0 to 65535	
O_2 ADC Peak (Diagnostic)	0x7A25 (31269)	0 = Error Error during the diagnostic index change process 1 = Not Ready Diagnostic values are currently disabled **2 = Ready** Diagnostic values enabled	**ACTION:** Monitor in system

Table 3-10 – O_2 Sensor - Holding Registers

Name	Register Address	Description / Valid Values	Actions / Notes
O_2 Control	0xA123 (41251)	Reserved	**ACTION:** Monitor in system **NOTE:** The O_2 measurement cannot be switched off.
Clear O_2 Warning	0xA124 (41252)	**0 = Idle** 1 = Clear warning (Reserved)	**ACTION:** None **NOTE:** Any warning present in *O_2 Warning* (31252) will auto clear if the condition that caused the warning is removed.
Clear O_2 Error	0xA125 (41253)	**0 = Idle** 1 = Clear Error	**ACTION:** Set in system **NOTE:** If an error present in *O_2 Error* (31253) has forced *O_2 Status* to *OFF* (31258 = 1) the error may be cleared using this register and an attempt made to reset the status by setting the *O_2 Control* to *Reset Status* (41256 = 2 or 41259 = 2). If the error persists, contact technical@sstsensing.com for guidance.
O_2 Offset (Calibration)	0xA126 (41254)	Floating point IEEE 754 (MSB 16-bits) Unit = ppm Valid Range = 0 to 100	**ACTION:** Set/Monitor in system **NOTES:** Any changes are saved in EEPROM and retained on power loss. Default = **10**. Used in Section 3.6.1 on page 3-14.
	0xA127 (41255)	Floating point IEEE 754 (LSB 16-bits) Unit = ppm Valid Range = 0 to 100	
O_2 Offset Control (Calibration)	0xA128 (41256)	**0 = Idle** 1 = Apply Calibration 2 = Reset Status	**ACTION:** Set in system **NOTE:** Used in Section 3.6.1 on page 3-14.
O_2 Gain (Calibration)	0xA129 (41257)	Floating point IEEE 754 (MSB 16-bits) Unit = ppm Valid Range = 10 to 1200	**ACTION:** Set/Monitor in system **NOTES:** Any changes are saved in EEPROM and retained on power loss. Default = **1000**. Used in Section 3.6.2 on page 3-14.
	0xA12A (41258)	Floating point IEEE 754 (LSB 16-bits) Unit = ppm Valid Range = 10 to 1200	
O_2 Gain Control (Calibration)	0xA12B (41259)	**0 = Idle** 1 = Apply Calibration 2 = Reset Status	**ACTION:** Set in system **NOTE:** Used in Section 3.6.2 on page 3-14.

3.6 Calibrating the Sensor

3.6.1 Offset Calibration

1. Confirm *O_2 Offset Status (Calibration)* = *Ready* (31259 = 2).
2. Apply a "zero" (Offset) gas of a known ppm value over the sensor.

NOTE: The "zero" gas MUST have an Oxygen concentration less than 100ppm; it is recommended that the "zero" gas is less than 25ppm.

NOTE: Recommended flow rate is one litre per minute.

3. Monitor *O_2 Uncalibrated Value* (31254 and 31255) and wait at least 30 minutes until the value stabilises.

NOTE: Wait time based on purging from air.

4. Input the "zero" gas value (ppm) into *O_2 Offset (Calibration)* (41254 and 41255).
5. Set *O_2 Offset Control (Calibration)* to *Apply Calibration* (41256 = 1).
6. During the calibration routine *O_2 Offset Status (Calibration)* will change to *Busy* (31259 = 3) and *O_2 Status* will change to *Calibration* (31258 = 6). O_2 measurements are not valid during this phase.
7. When the calibration routine is complete *O_2 Offset Status (Calibration)* will change to *Complete* (31259 = 4) and *O_2 Status* will return to *ON* (31258 = 4).
8. Set *O_2 Offset Control (Calibration)* to *Reset Status* (41256 = 2) to return *O_2 Offset Status (Calibration)* to *Ready* (31259 = 2).
9. Confirm the *O_2 Calibrated Value* (31256 and 31257) is within ±2 ppm of the calibration gas applied. If not, repeat Steps 3 to 8 and allow the *O_2 Uncalibrated Value* (31254 and 31255) to stabilise for a longer period. If multiple calibration attempts do not result in an accurate calibration, contact technical@sstsensing.com for guidance.

3.6.2 Gain Calibration

The Offset is the main calibration point, however, if a "span" (Gain) calibration is required:

1. Confirm *O_2 Gain Status (Calibration)* = *Ready* (31260 = 2).
2. Apply a "span" (Gain) gas of a known ppm value over the sensor.

NOTE: The "span" gas MUST have an Oxygen concentration greater than 100ppm; it is recommended that the "span" gas is the maximum of the working range or, if available, 1000ppm should be used.

NOTE: Recommended flow rate is one litre per minute.

3. Monitor *O_2 Uncalibrated Value* (31254 and 31255) and wait at least 10 minutes until the value stabilises.

NOTE: Wait time based on purging from air.

4. Input the "span" gas value (ppm) into *O_2 Gain (Calibration)* (41257 and 41258).
5. Set *O_2 Gain Control (Calibration)* to *Apply Calibration* (41259 = 1).
6. During the calibration routine *O_2 Gain Status (Calibration)* will change to *Busy* (31260 = 3) and *O_2 Status* will change to *Calibration* (31258 = 6). O_2 measurements are not valid during this phase.
7. When the calibration routine is complete *O_2 Gain Status (Calibration)* will change to *Complete* (31260 = 4) and *O_2 Status* will return to *ON* (31258 = 4).

8. Set *O_2 Gain Control (Calibration)* to *Reset Status* (41259 = 2) to return *O_2 Gain Status (Calibration)* to *Ready* (31260 = 2).
9. Confirm the *O_2 Calibrated Value* (31256 and 31257) is within ±2 ppm of the calibration gas applied. If not, repeat Steps 3 to 8 and allow the *O_2 Uncalibrated Value* (31254 and 31255) to stabilise for a longer period. If multiple calibration attempts do not result in an accurate calibration, contact technical@sstsensing.com for guidance.
